DETAILED ACTION

It would be of great assistance to the Office if all incoming papers pertaining to a filed application carried the following items:

1. Application number (checked for accuracy, including series code and serial no.).
2. Group art unit number (copied from most recent Office communication).
3. Filing date.
4. Name of the examiner who prepared the most recent Office action.
5. Title of invention.
6. Confirmation number (See MPEP § 503).

Information Disclosure Statement

The information disclosure statement filed 7/23/01 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. **and foreign patent; each publication** or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 5,093,840. Although the conflicting claims are not identical, they are not patentably distinct from each other because both teach or disclose a method for controlling a mobile station's transmission in spread spectrum communication system comprising: transmitting from the base station a spread spectrum signal and a threshold (transmitting a generic spread spectrum signal and an APC); receiving at the mobile station the spread spectrum and the threshold (acquiring and decoding the generic spread spectrum and APC); measuring a received power level of the received spread spectrum signal(detecting a received power level of the generic spread spectrum); comparing the received power level to the threshold (generating a comparison signal by comparing the received power level to the threshold); and adjusting the mobile station's transmission power level based on in part a result of the comparison (adjusting a transmitter power level of the transmitter spread spectrum signal using the comparison signal).(see claims, 1,2 and 8 of U.S. patent 5,093,840)

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. patents 5,299,226; 5,631,921; 6,226,316; 5,535,238 and 5,815,798 are cited to show spread spectrum adaptive power control communications system and method.
